The name CLEAN SMOKE is a bit of a contradiction but we have actually created a practical test smoke so clean from chlorides it is suitable to perform air flow tests in server rooms and other sensitive areas.

This product is ideal for the air balancing industry, energy conservation and weatherization, for HVAC professionals, testing of smoke and fire prevention systems, special effects or anywhere you need just the right amount of smoke in just the right place without the effects of chlorides.

The smoke particulate is of a dry and solid character will not leave behind any oils or messy residue on sensitive surfaces. The smoke is white to light grey in color and is reflective and easily photographed and observed.

The new Clean Smoke has been developed over the last few years and has been requested by our customers looking for a cleaner and greener product for air flow studies in sensitive areas such as computer rooms, exhaust hoods, special laboratory fume hoods, and anywhere concern for sensitive electronics need to be addressed. We are sure this will become a standard in the industry and we will welcome new and expanded suggested uses from you, our satisfied customers.

The CLEAN SMOKE™ series comes in following sizes:

- S 102 CL, 45 Sec 150 Cubic Ft.
- S 103 CL, 65 Sec 600 Cubic Ft
- S 104 CL, 3 Min. 1,200 Cubic Ft
- S 105 CL, 3-4 Min. 2,500 Cubic Ft

Please refer to our website [www.regin.com](http://www.regin.com) for further information or contact us by phone.
